

main data → vendor screening by frequency →
 outlier removing → data visualization → train (svm)
 0.739 → Result analysis → confusion matrix → ROC →
 Random Forest → 0.9575 → Result analysis →
 confusion matrix → User input setup →
 Result calculation loop → Result

Fuzzy Base. ~~Basic~~ Fuzzy AHP

Fuzzy AHP Rules applied by xlsx rules →

main data → weighted → data cleaning in the
 exactly same way like in ml → supply selection → 0.785

→ clean excel.

→ from clean excel to Fuzzy AHP

below of this ipynb → rough.

B3Ns

clean excel → ~~uncertainty~~ probability dist → uncertainty
 → Risks formula implementation → open/Network/External
 xlsx → combined of 3 probabilities → final xlsx → vendor risk.

BBWS — Input

Output

clean-excel → Uncertainty.xlsx

Uncertainty2.xlsx

Main Factor →

Operational risk probability →

Network risk probability →

External risk probability →

Operational risk

Network risk

External risk

~~Vendor risk~~
Vendor risk

Supplier selection — main data —> Filtered-data.

Fuzz AHP — main data - weighted. —> clean excel
